## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,4,17, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Reilly et al (US 5,383,858).

Reilly teaches an injector (27) and a syringe (32), the syringe comprising a body (32) with an encoding device (70) and a plunger (43), the injector comprising a housing (26), a motor (not pictured), a controller (68), a sensor (72), a drive member (48), and a plunger engagement detection device (audible/tactile indicator, see abstract).

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4,6,11, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reilly as applied to claim 1 in view of Mandro et al (US 5,533,981).

Reilly does not teach a motor current measuring device or a sensor as the plunger engagement detection device.

Art Unit: 3767

Mandro teaches a switch 132 on a plunger actuator (105) which indicates that the plunger actuator and syringe plunger are in contact, based on the current drawn by the motor (Col 10).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the plunger engagement detector of Mandro in order to make the detection more sensitive and actuate, as compared to a mechanical sensor.

#### ***Allowable Subject Matter***

5. Claims 19-28 are allowed.
6. Claims 2,3, 5,7-10 and 12-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Double Patenting***

7. Claims 2,3, and 6-15 are objected to under 37 CFR 1.75 as being a substantial duplicate of claims 19-28. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

***Response to Arguments***

8. Applicant's arguments filed 2 July 2007 have been fully considered but they are not persuasive. Applicant has argued that the drive member of Reilly does not automatically advance and engage the plunger when the syringe is mounted. Applicant has argued that this happens simultaneously with the mounting of the syringe in Reilly. The examiner agrees, but finds that this reads on the claims since "when" can mean simultaneously. Applicant should claim that after the syringe has been mounted the drive member automatically advances in order to clarify their position. Applicant's arguments regarding claim 5 are persuasive. The rejection of claim 5 is withdrawn.

***Conclusion***

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
